SuryaLedger

Service, on record.

Voice-first solar-service handovers
with source evidence and human review.

Working replay prototype
Synthetic demo data
Bolna connection verified

The service handover

Small rooftop-solar installers and their service supervisors

Buyer hypothesis

Missing details may trigger follow-up calls.
Customer interviews still need to test this.

01 Equipment identity

02 Work actually reported

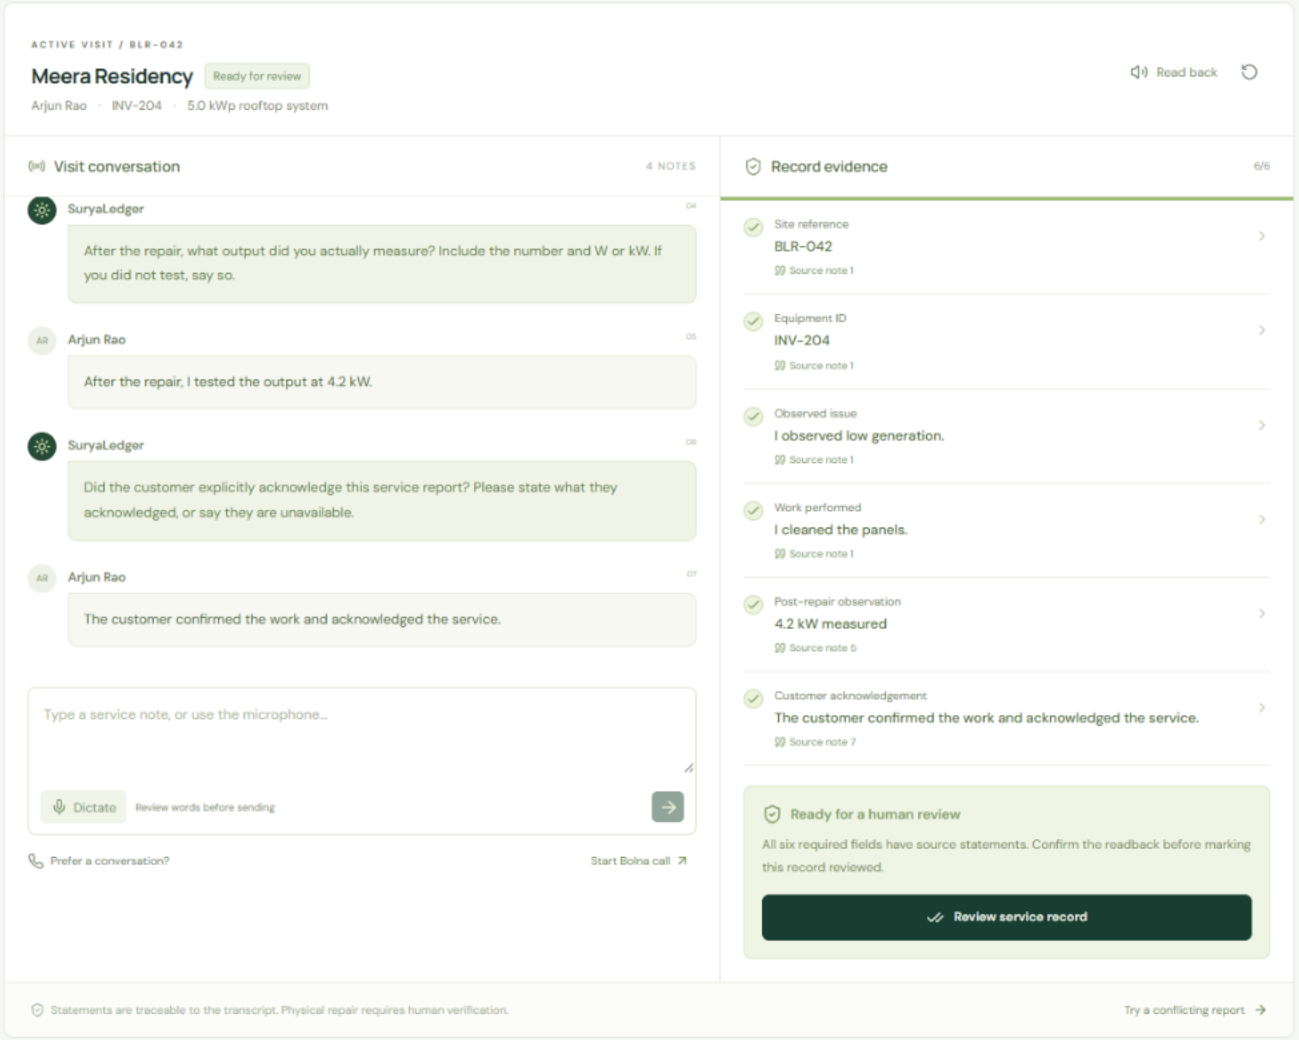

03 **Observed post-repair output**

04 Customer acknowledgement

Delhi's solar portal describes five years of vendor O&M under PM Surya Ghar.

Source: Delhi Solar Portal, O&M procedure. Accessed 21 Oct 2026. Context does not establish demand.

The evidence and the next question

A missing test keeps the record pending

"I have not tested it yet" leaves the observation missing.

A reported 4.2 kW links to its source note

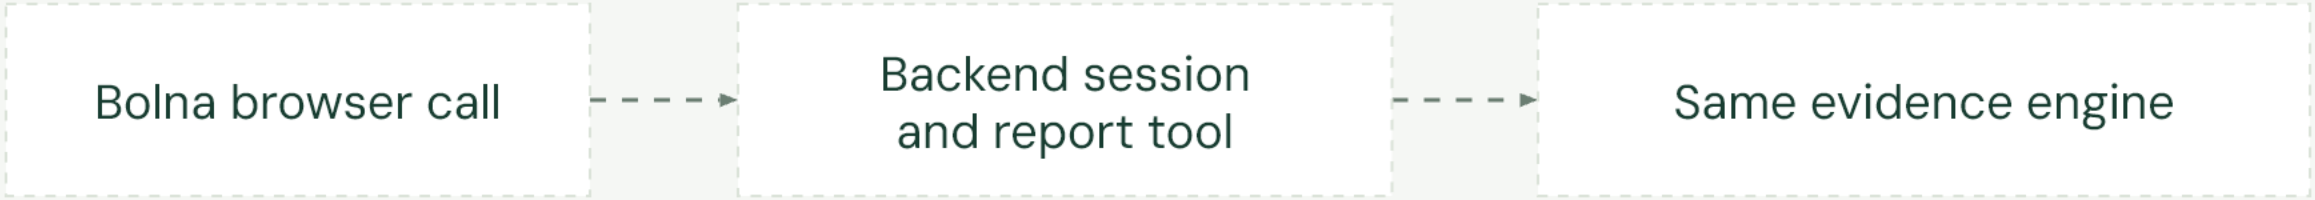

Conflicting repairs require an explicit correction. A human reviews the record.

Actual local prototype, synthetic visit. Source quotes establish submitted statements, not physical work.

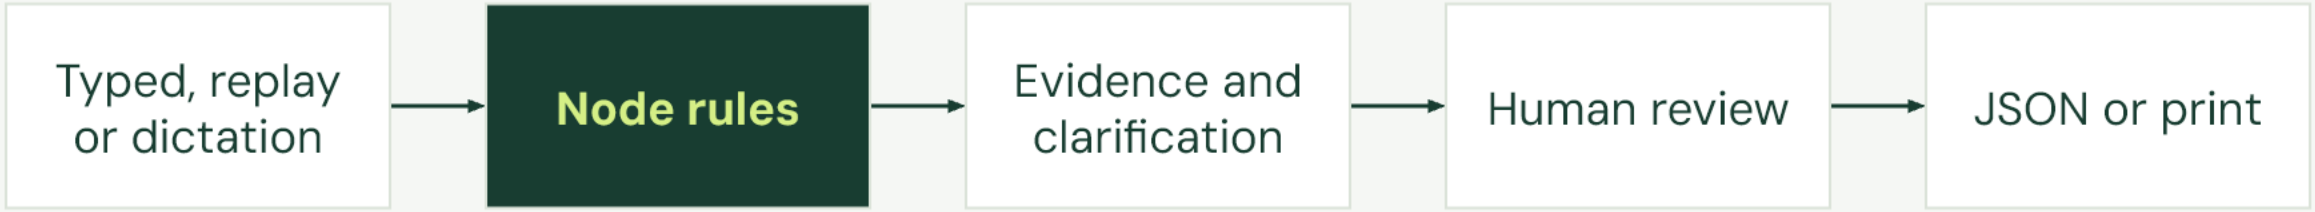

The rule engine and the voice layer

Optional live path

Connection and report callbacks verified.
Complete spoken handover remains unverified.

Working local path

Defined English and limited Romanized Hindi patterns. No general speech-accuracy claim.

Sources: repository architecture, Bolna Web Call SDK and custom-function schema. Account key stays on the backend.

Existing products overlap with this idea

Product	Advertised overlap
Settle	Voice reports, discrepancy flags, missing-field gates
MaintainX	Voice work-order summaries and maintenance records
SenseHawk	Solar work orders, field evidence and handovers

Our evaluation focus

Solar closeout with exact quotes, visible corrections, targeted questions and a separate review step.

Software checks and current limits

58/58

Automated tests

25/25

Authored synthetic cases

12/12

Browser workflow checks

Checks cover negation, corrections, wrong-site reports, conflicting repairs, source quotes and review/export.

Finite, known fixtures. No field accuracy or speech benchmark.
No customer pilot. Full voice handover remains unverified.

Sources: repository docs/VERIFICATION.md, evals/results.json and docs/browser-qa.json. Verified 22 Oct 2026.

A ten-visit pilot

10

Consented service handovers with one installer and supervisor

Compare with today's process and a plain transcript summary.

Measure

Completion time
Supervisor corrections
False-ready records

Pricing hypothesis

₹3,000 / team / month plus usage
